25X1	[redacted]
2 March	12 engines, picked up by truck [redacted]
25X1	[redacted]
5 to 10 March	25 Chevrolet trucks, picked up by soldiers who arrived by truck [redacted]
25X1	[redacted]
4.	After 2 January 1951, efforts were made to have Ford trucks included in the repair program of the shop. Since the available assembly line was not suited for this type of trucks because of the different tread, the assembly line was modified. However, it did not work in the modified state and had to be reconverted. The repair of 10 Ford trucks on special supports was attempted. The Ford trucks turned in at the shop in December 1950 allegedly came from a repair shop in Leipzig which was said to have been geared to a more essential field of production. This shop, like that in Zeesen, is a branch of a Soviet repair shop unit. (2) The repair work on the Ford trucks was still incomplete prior to 10 March. Nine of the aforementioned 10 Ford trucks were cannibalized and their parts assembled to make one truck ready for operation. The assembly line had been modified for Ford vehicles.

However, there was still a shortage of tools for this kind of repair, and the tools had to be made in the shop. Efforts to obtain most essential tools from outside sources were of no avail. A sand blasting machine 2 1/2 meters square, was recently installed at the shop and used primarily for the cleaning of rims.

5. The number of Chevrolet trucks needing repairs 10 March had decreased to 150. The vehicles were parked in the yard and were scheduled for repair during March and April.
6. At the beginning of January 1951, 50 workers were removed from the assembly and disassembly sections, and were not replaced. A total of 180 men were discharged on 25 January, allegedly so that they could work for VEB ABUS in Wildau. Some of them were rehired in Schoeneweide after a short time, but, no additional workers were hired at the ABUS. (3)
7. Soviet officers, arriving in sedan [redacted] inspected the repair plant on 20 December 1950. On 10 February 1951, a commission of 1 general and 6 field-grade officers arrived in Horch sedan [redacted] and sedans [redacted]. They inspected the plant thoroughly with special emphasis on the condition of the machinery. The same commission had allegedly inspected the plant in Schoeneweide on 6 February. (3)

[redacted] Comments.

- (1) The plant is a large branch installation of the 53d Central Repair Shop of the GOFG and is located on the premises of the former broadcasting station south of Koenigswusterhausen. [redacted]  
The present report supplies additional data on the capacity and work process of the plant.
- (2) The repair plant may be the one in the former Koellmann Plant or the one in the former Buessing Plant, both plants are branch repair shops of the 54th Central Repair Shop of the GOFG in Leipzig. [redacted]
- (3) The statement probably refers to the branch plant of the 53d Central Repair Shop in Berlin-Oberschoeneweide [redacted]
- (4) The bulk of the motor vehicle [redacted]
